Continuation of Substance of Interview including description of the general nature of what was agreed to if an agreement was reached, or any other comments: Applicant's representative presented the differences between the applied prior art and the instant invention. The examiner notified applicant's representative that the claim does not appear to be patentably distinct and the rejection is still valid. The examiner further pointed out to applicant's representative that the claim lack structural relationship between the optical rotator, cholesteric liquid crystal and the quarter wave plate. Further, it was also pointed to applicant's representative that the argument such as the axes of the quarter wave plate being rotated by an angle of 45 degrees by means of optical rotator plays were irrelevant since the limitation is not in the claim and insertion of such limitation will be helpful to further define the claimed invention. Finally applicant's representative was also notified that any amendment to the claims would require further consideration to define patentability. .
